

## SQL SERVER USER MANAGEMENT AND ACCESS CONTROL

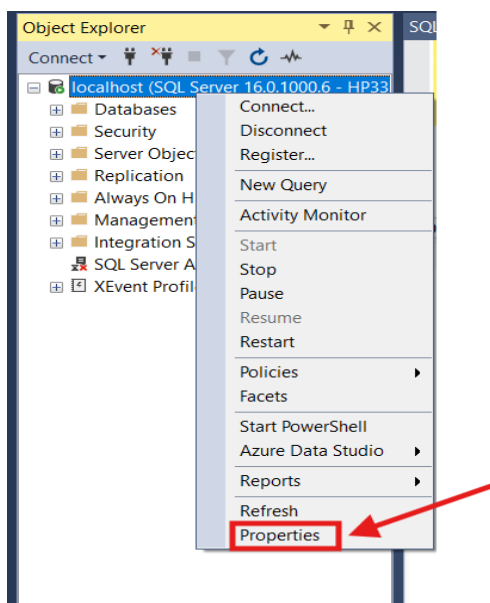

Step 1: Connect to your Microsoft SQL Server DB

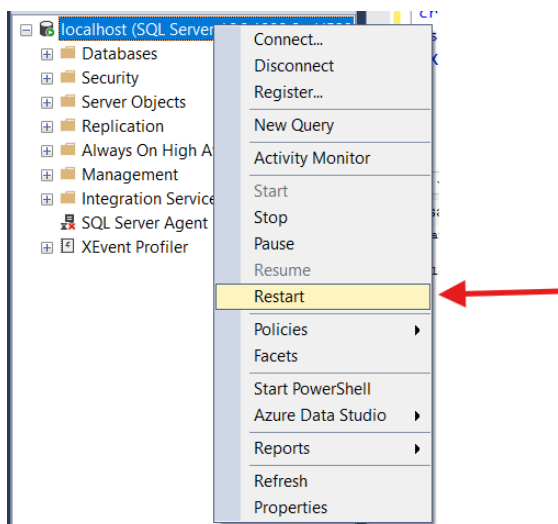

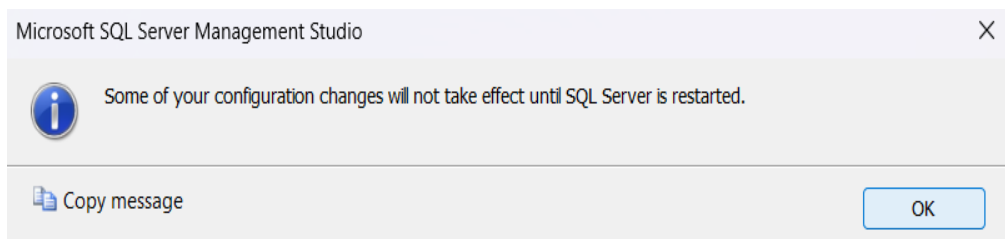

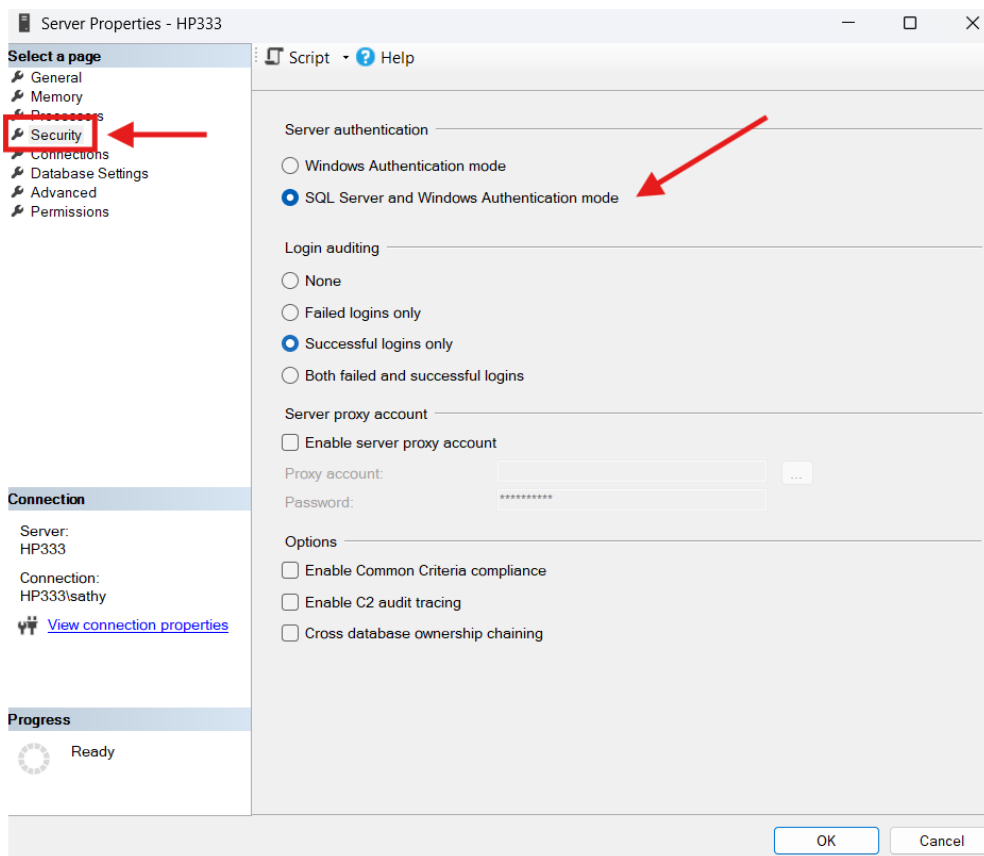

Step 2: Set up a sample database where the user you create will have access to resources and can perform operations within that specific database.

`create database demo_db;`

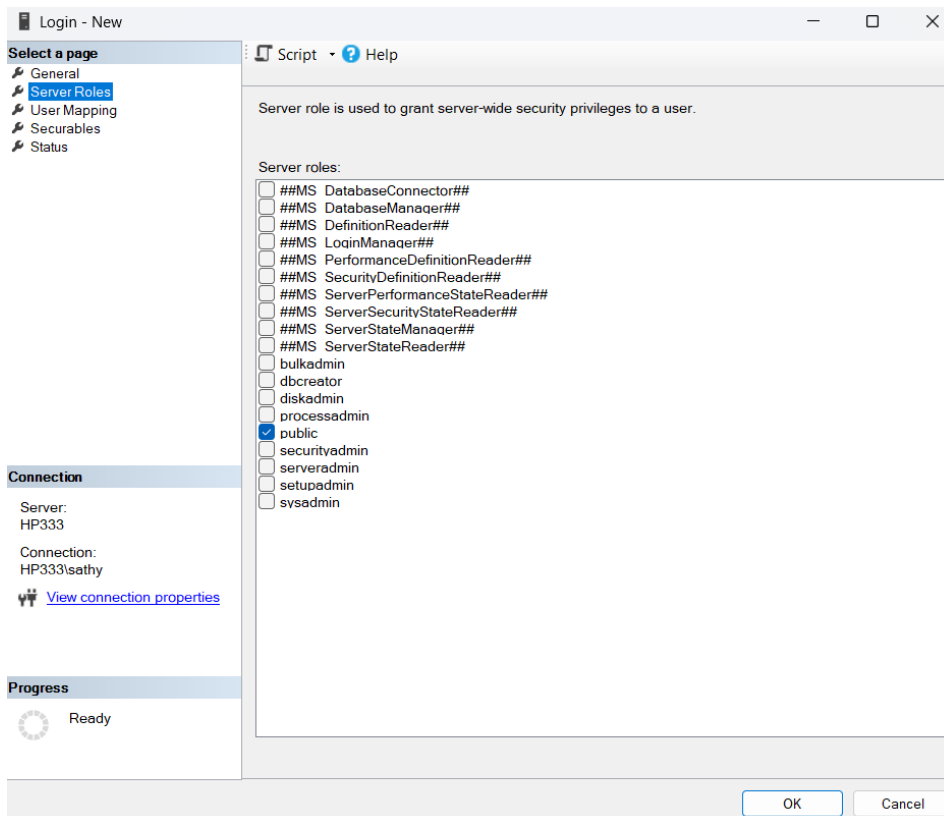

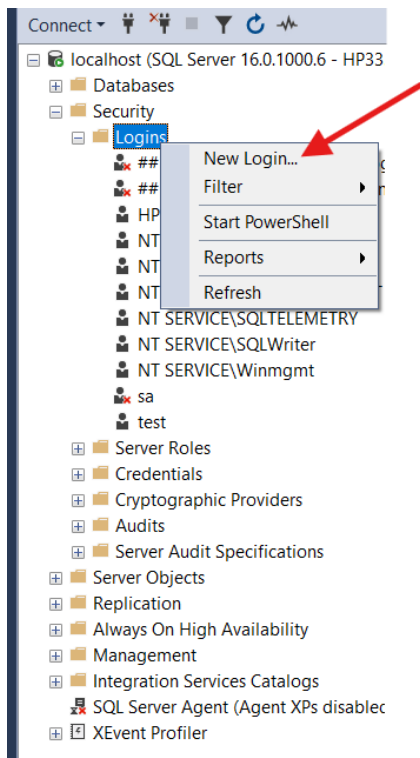

Step3: Perform the following configurations

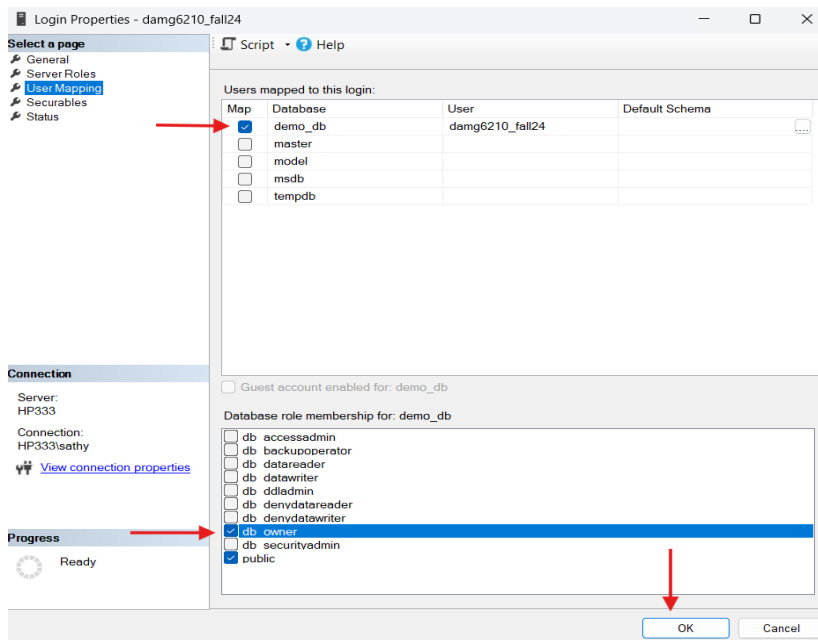

Step 3: (Follow either of the below methods (1 --> UI, 2 --> SQL))

### Method 1 (UI based)

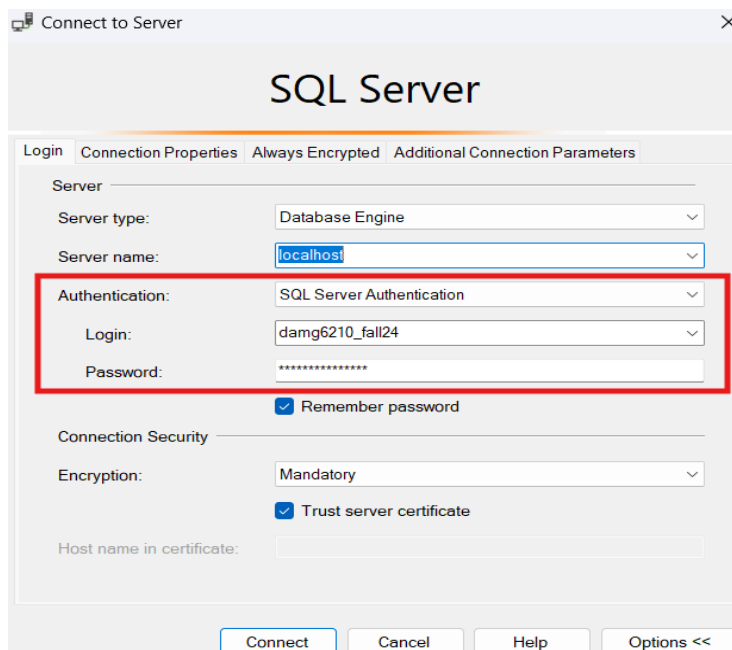

Method 2 (SQL based): Execute the following script (Replace the object names with your preferred choices)

```
create login damg6210_fall24 with password = 'Damg6210_Fall24';
create user damg6210_fall24 from login damg6210_fall24;
use demo_db;
EXEC sp_addrolemember 'db_owner', 'damg6210_fall24';
```

Step 4: Test your connection (Make sure you use Windows Authentication)

You're all set once you successfully establish the connection!
